

The **Xnotta Light** System is an online software that allows the Customer to manage his Receptive Structure's offers and promotions on the web, enabling the **Online Booking** Feature and linking it to any existent website.

It's mostly dedicated to small Receptive Structures (B&B, farmhouses, lodging-house keepers, small hotels) that own no management software still, at the same time, don't want to lose the great opportunity to increase their turnover via Web means.

Other than this, there also is the chance to add a custom offer on a Consortium's Portal (on which the customer would like to be promoted).

In case the RS Manager would like to be promoted in multiple structures, the best option would be to purchase **Xnotta** System since the "Light" version does not allow more than one Web profile and one Consortium profile.

**Xnotta Light** DOES NOT allow booking management (which is allowed by **Xnotta**); instead, it's a standalone online booking module that includes some easy booking activities (such as reservation visualization etc).

## Features:

- 100% Online Platform.
- Front/end is available in 4 different languages (ITA, DE, EN, FR).
- Realtime Online **Allotments Availability Check**.
- Online Booking Services, including Receptive Structure's **Custom Agreements** Acceptance (by the customer).
- Online booking supports **multi-location** booking services.
- **Confirmation email**, which is sent both to the customer and the Receptive Structure's Manager.
- "Closed Mode" Management is supported.
- Up and Working 24/7.
- No commission fees! (Not even on reservations!).
- Parameters can be customized: Structure's Data, % deposit, login data, IBAN Data.
- Minimum (Booking) Stay is fully customizable (one, two, three days or more).
- **Unlimited Allotment Management**, including the ability to add desired allotments (being those rooms, villas, apartments, bungalows, farmhouses or B&B).

- Allotments **included services** details can be added. **Photographs** (with zoom feature) can be added as well.
- Ability to **opt-in** and **opt-out** allotments, depending on which ones are meant to be published on the Web.
- **Prices Management**: per period, per guest and/or allotment, with or without any board (hb, fb, ...), including daily or weekly management.
- **Surcharges** and **Discounts** can be easily customized; they can also be differentiated by guests age, short sojourns, number of guests.
- An "**offline booking management**" is included, enabling the customer to manually add bookings that were not generated via web in order to keep the allotments availability up to date.
- Bookings that are already in the system can be moved or deleted.
- The booking/reservation is saved into the History File after five days. This parameter can be modified anytime by the customer himself (via setup).
- The (booking) History File can be browsed by booking number and by customer.
- **Customer Master Data**: keeps a record of Master Data and sends login Data to the customer for future reference (ie, in case di future bookings).
- **Bank** Internet *Payment System* enabled.
- **Credit Card** Payment System Module (to be actived upon request).
- PDF **Voucher** is sent (or printed) to the customer. It includes all booking data and any Receptive Structure's relevant data (how to get to the Receptive Structure, Maps, Address, etc).
- Tableau de Bord (in order to manage reservations and their phases).
